

XH61 – Sandy Bridge performance packed into a 3-litre case

The ultra-compact Shuttle Slim-PC Barebone XH61 is the best choice for those seeking an inexpensive desktop PC which is significantly smaller than a tower PC. The XH61's LGA1155 socket supports Intel's powerful Sandy Bridge processors that stand for superior integrated graphics performance and improved energy efficiency. The XH61 also scores with an elegant design consisting of coated surfaces and shiny drive doors. Measuring merely 3.5 liters in volume, around a tenth of the size of a traditional tower PC, it is designed to provide the perfect balance of aesthetics and meeting daily computing demands in homes and offices.

Shuttle Slim-PC Barebone XH61 – Product Features

A clean and modern 3-litre chassis

Shuttle has always placed great emphasis on the interior and exterior aesthetics of their Mini-PCs with the belief that a good blend of style and form factor allow the Mini-PC to be attractive, versatile and work well in almost any environment. And the XH61 was designed just like that and shines in a clean and modern appearance. The optical drive and front panel connectors are elegantly concealed behind drive doors to provide maximum protection. This tiny tot barely stands 7.3 cm in height with a volume of 3.5 litres.

What does Barebone mean?

The Shuttle Slim-PC Barebone XH61 consists of a stylish case with pre-installed mainboard, processor cooling fan and external power adapter. Despite its small form factor it offers outstanding connectivity, functionality and performance. For a complete Mini-PC system, a few components still need to be added. The Mini-PC is customisable and takes socket 1155 processors (max. 65W), standard DDR3 memory, slim-line SATA DVD drive, 2.5" hard disk (or SSD). Once the desired operation system is installed, the XH61 is ready to use. Moreover, the system features pre-routed cables that are tied down from factory to reduce clutter, increase airflow and ease component installation.

Supports socket 1155 processors and up to 16 GB DDR3

A wide range of socket 1155 Intel processors is available starting from Celeron up to Core i7 processors with a maximum TDP of 65W. Plus, the system memory can be installed accordingly to individual needs up to a maximum capacity of 16 GB DDR3 memory.

Great Connectivity

On the front, elegantly hidden from view behind drive doors, the panel reveals two USB 2.0 ports for external drives, MP3 players etc. There are also two 3.5mm jacks for headphone and microphone. In addition, the back panel offers a wide range of I/O connectivity as well.

Supports Dual View Technology

Dual View technology offers multiple display support on up to two separate monitors. This helps to improve on productivity by allowing for spreading multiple windows across two monitors while working with them simultaneously. XH61 features two video outputs.

Video outputs

XH61 features two video outputs: D-Sub/VGA and HDMI. With optional adapters DVI-D devices can be connected to the HDMI port.

D-Sub/VGA means analog video signals are put out.

HDMI supports digital video plus multi-channel digital audio output.

DVI-D means the connector only outputs digital video signals.

Kensington Lock

This is a small, metal-reinforced hole as part of an anti-theft system. (The lock and cable are not included)

Optional stand for vertical operation (PS01)

XH61 is to be used in horizontal position as standard. With the optional stand accessory (PS01), it can also be placed in vertical position.

Optional VESA mount (PV02)

Its optional VESA75/100 wallmount allows it to be installed on to walls or to be attached to the rear side of a monitor which is particularly interesting for the industry segment, company buildings and public institutions.
